

Division. 1799.

Rule

Prepare the given numbers if they require it by the rules in Reduction, then multiply the denominator of the divisor into the numerator of the dividend for a new numerator and the numerator of the divisor into the denominator of the dividend for a new denominator.

When any whole number is divided by a fraction less than unity the quotient will be greater than the dividend: but if any fraction be divided by a whole number greater than unity, the quotient will be less than the dividend.

August 22nd. 1799.

Divide $\frac{14}{27}$ by $\frac{2}{3}$

$$\begin{array}{l} 3 \times 14 = 42 \\ 2 \times 27 = 54 = \frac{7}{9} \text{ Ans}^{\text{r}} \end{array}$$

Divide $672\frac{2}{30}$ by $13\frac{5}{6}$

$$\begin{array}{l} 672\frac{2}{30} = \frac{20169}{30} \\ 13\frac{5}{6} = \frac{83}{6} \end{array}$$

$$\frac{20169}{30} \div \frac{83}{6} = \frac{20169 \times 6}{83 \times 30} = \frac{121014}{2490} = 48\frac{2}{5} \text{ Ans}^{\text{r}}$$

Divide $7935\frac{24}{70}$ by $10\frac{3}{7}$

$$\begin{array}{l} 7935\frac{24}{70} = \frac{555474}{70} \\ 10\frac{3}{7} = \frac{129}{7} \end{array}$$

$$\frac{555474}{70} \div \frac{129}{7} = \frac{555474 \times 7}{129 \times 70} = \frac{3000318}{9030} = 430\frac{2}{3} \text{ Ans}^{\text{r}}$$
